

Brownfield Bonanza: National Grid scoops two awards for work at former gas sites including Beckton

? National Grid scoops two gongs at 2014 Brownfield Briefing Awards

06 Nov 2014

- Awards gained for best conceptual design and public participation
- Removal of disused gas holders is helping breathe new life into towns and cities

National Grid is celebrating after winning two awards at the recently held 10th Anniversary Brownfield Briefing Awards.

The awards recognise technical and conceptual excellence in projects at former industrial land, commonly referred to as brownfield sites. Judged by an expert panel, the awards are the flagship event for the brownfield community and one of the industry's highest accolades.

The first award was for Best Conceptual Design for work following the removal of a gas holder in Beckton. Working with contractors Erith, and designers Parsons Brinkerhoff, this award recognised the project team's innovative techniques in clearing up the land where a gas holder once stood. This included operating a contraflow system to ensure smooth local traffic flows while work was carried out.

The second trophy of the evening was awarded for 'Changing Skylines: Gasholder Demolition' in the Best Public Participation category. Over the last year, National Grid has dismantled a number of gasholders spread across the South of England as part of its programme of freeing up disused sites for redevelopment. During this work National Grid has worked with JBP and Local Dialogue, to implement a comprehensive engagement programme to build successful relationships with local communities, politicians and groups.

Richard Alden, Head of Commercial Property at National Grid said "We are absolutely delighted to win these two awards. They show our teams are not only working innovatively but are also working responsibly and fully engaging with the local communities where we're working.

"Our programme of gasholder removal is freeing up land for exciting redevelopment possibilities and breathing new life into our towns and cities."

Notes to Editors:

National Grid is one of the largest investor-owned energy companies in the world and has been named Responsible Business of the Year 2014 by Business in the Community. We own and manage the grids that connect people to the energy they need, from whatever the source. In Britain and the north-eastern states of the US we run systems that deliver gas and electricity to millions of people, businesses and communities.

In Britain, we run the gas and electricity systems that our society is built on, delivering gas and electricity across the country. In the North Eastern US, we connect more than seven million gas and electric customers to vital energy sources, essential for our modern lifestyles.

National Grid in the UK:

- We own the high-voltage electricity transmission network in England and Wales, operating it across Great Britain
- We own and operate the high pressure gas transmission system in Britain
- Our gas distribution business delivers gas to 10.9 million homes and businesses
- We also own a number of related businesses including LNG importation, land remediation and metering
- National Grid manages the National Gas Emergency Service free phone line on behalf of the industry - 0800 111 999 (all calls are recorded and may be monitored).
- Our portfolio of other businesses is mainly concerned with infrastructure provision and related services where we can exploit our core skills and assets to create value. These businesses operate in areas such as Metering, Grain LNG Import, Interconnectors and Property. National Grid Carbon Ltd is a wholly owned subsidiary of National Grid. It undertakes Carbon Capture Storage related activities on behalf of National Grid.

National Grid in the US:

- National Grid delivers electricity to approximately 3.4 million customers in New England and upstate New York
- We own 3.8 gigawatts of contracted electricity generation, providing power to over one million LIPA customers
- We are the largest distributor of natural gas in northeastern U.S., serving approximately 3.5 million customers in New York, Massachusetts and Rhode Island.

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the

communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.

- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
