

Gas mains upgrade in the pipeline for Sutton-in-Ashfield

Vital pipe replacement in Sutton-in-Ashfield

19 May 2016

- **Work will secure gas supplies until the end of the century**
- **Temporary road closure on Sheepwash Lane**

A major overhaul of the gas mains in the Sheepwash Lane area of Sutton-in-Ashfield is underway to keep gas supplies flowing to residents until the end of the century.

National Grid is renewing more than 1500 metres of gas mains in seven local streets: Sheepwash Lane, Pepper Street, Lucknow Drive, Young Crescent, Station Road, Vellus Court and Mowlands Close.

The project, which began on 18 April, is expected to be completed by the end of June. The existing iron gas mains are being replaced with tough new plastic pipes, which will last at least 80 years.

To carry out the work safely, it will be necessary to close Sheepwash Lane from 6 June, for three weeks. A diversion route – via Pepper Street and Station Road - will be in place for through traffic and access will be maintained for residents.

National Grid Authorising Engineer Paul Patrick said: "National Grid plays a vital role in keeping people warm. This essential work will mean that residents and businesses can continue to count on a safe and reliable gas supply for decades to come. We will make every effort to minimise any disruption and complete the project as soon as possible."

Gas engineers may need access to homes and businesses to replace service pipes (the pipes that take gas from the main in the road to individual properties). This work will involve temporarily interrupting the gas supply and anyone who is affected will be notified beforehand.

All National Grid engineers carry official identity cards, which people should ask to see before allowing them on their property.

For any enquiries about this work people should contact National Grid's customer services team on 0800 096 5678. To find out more about how National Grid replaces gas mains and how that affects residents and businesses go to www.bettergaspipes.co.uk

Notes for editors

Notes to Editors:

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

National Grid in the UK:

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
