

# Vital gas works under way to benefit Sudbury

Work has started to replace gas mains in Waldingfield Road

21 Jul 2016

- **Work will keep gas flowing in Sudbury for the rest of the century**
- **Road closure necessary**

Work is underway on a gas mains upgrade in Sudbury to keep gas flowing to homes and businesses until the end of the century.

In a six-week project National Grid will be renewing gas mains in a section of Waldingfield Road. Work started today (Thursday 21 July) and is due to be completed by the beginning of September.

To enable this essential work to be carried out safely traffic management measures will be in place. This will involve two-way temporary traffic lights between 65 Waldingfield Road and the junction of Lansdowne Road. It will also be necessary to close Waldingfield Road between house numbers 11 and 65 from Monday 8 August to Friday 18 August.

Access to homes and businesses will be maintained. A diversion route will be in place.

National Grid Authorising Engineer Vince Doggett said: "National Grid's job is to connect people to the energy they use. This is a vital project to ensure that the residents and businesses in Sudbury continue to enjoy a safe and reliable gas supply for many years to come.

"We appreciate that this is a main road in Sudbury and we will make every effort to minimise any inconvenience caused by our work. We have planned this project during the school summer holidays to reduce the impact on traffic. We would like to thank people for their patience and co-operation."

Gas engineers may need access to homes and businesses to replace service pipes (the pipes that take gas from the main in the road to individual properties). This work will involve temporarily interrupting the gas supply and anyone who is affected will be notified beforehand.

All National Grid engineers carry official identity cards, which people should ask to see before allowing them on their property.

For any enquiries about this work people should contact National Grid's customer services team on 0800 096 5678. To find out more about how National Grid replaces gas mains and how that affects residents and businesses go to [www.bettergaspipes.co.uk](http://www.bettergaspipes.co.uk).

Notes for editors

**Notes to Editors:**

National Grid is pivotal to the energy systems in the UK and the north eastern United States. We aim to serve customers well and efficiently, supporting the communities in which we operate and making possible the energy systems of the future.

**National Grid in the UK:**

- We own and operate the electricity transmission network in England and Wales, with day-to-day responsibility for balancing supply and demand. We also operate, but do not own, the Scottish networks. Our networks comprise approximately 7,200 kilometres (4,474 miles) of overhead line, 1,500 kilometres (932 miles) of underground cable and 342 substations.
- We own and operate the gas National Transmission System in Great Britain, with day-to-day responsibility for balancing supply and demand. Our network comprises approximately 7,660 kilometres (4,760 miles) of high-pressure pipe and 618 above-ground installations.
- As Great Britain's System Operator (SO) we make sure gas and electricity is transported safely and efficiently from where it is produced to where it is consumed. From April 2019, Electricity System Operator (ESO) is a new standalone business within National Grid, legally separate from all other parts of the National Grid Group. This will provide the right environment to deliver a balanced and impartial ESO that can realise real benefits for consumers as we transition to a more decentralised, decarbonised electricity system.
- Other UK activities mainly relate to businesses operating in competitive markets outside of our core regulated businesses; including interconnectors, gas metering activities and a liquefied natural gas (LNG) importation terminal – all of which are now part of National Grid Ventures. National Grid Property is responsible for the management, clean-up and disposal of surplus sites in the UK. Most of these are former gas works.
